PLANET EXPAT IS HIRING A DEVELOPER PYTHON / DJANGO / ANGULARJS FOR CONTRACT FROM 6 TO 12 MONTHS.

Date : 01/01/2017

Job reference : 161104-16366711

Type of contract : Contract
Localisation : paris 0000, FR
Contract duration : From 6 to 12 months
Level of studies : Bachelor's Degree
Years of experience : 2-3 years

Company description :
Planet Expat provides career-boosting opportunities in some of the most innovative dynamic companies in Latin America, Europe, the US and Asia.

We are currently hiring for the company below:

"We are an e-commerce startup founded in 2014 and based in Paris, France. We developed a website focused entirely on selling refurbished devices (those that are almost brand new but can't be sold in retail).

Our philosophy is that we seek to have a positive impact on the environment by convincing our clients that re-using repaired electronic devices helps avoid millions of tons of electronic waste every year. Through our website, our users can acquire phones, tech products and kitchen supplies at a much lower price compared to retail. We work with many different tech suppliers and personally ensure the quality of the products that are being offered on our platform.

We are a team of 25. The company has been growing at a double-digit monthly rate and raised capital twice during 2015. We have registered an interesting growth within the French market and have been expanding into other European countries in 2016 (Italy, Germany, Spain, Belgium). "

Job description :
As a key member of the Tech team, you'll help develop and scale the company worldwide (France, Germany, Spain, Italy, Belgium as of today - many more countries to come).

Based in our Paris office, you'll work closely with the commercial, marketing and customer care teams, a group of passionate professionals who are dedicated to making sure their products and brand stand out.

Reporting to the Chief Technical Officer - who also happens to be one of our 3 co-founders - your duties will include:

Work on website architecture
Create new interfaces / BI / reporting tools
RESTful migration
Ensure all systems are always up to speed/date
Constantly optimise our response times
Scalability and security tests
Unit and functional tests
In a challenging environment:

Scalable architecture on Amazon Webservices
RESTful API, Python 2.7, Django
Algolia, Logmatic and NewRelic
Single Page Applications, Angular JS
Jenkins, Docker
5M queries/day

Required profile :

2-4 years of experience in a similar role, preferably in a start-up

Entrepreneurial mind is key, you are open-minded and always eager to exceed expectations

Web passionate, you love to create new applications

Django and Python expertise necessary, no secret

Ability to work under pressure and combine quality and efficiency

"Optimise and automate" is your lifestyle
